Try Pitch

"3mi lab architects and engineers demonstrated a serious approach to the large project, and along with technical skills, showcased excellent knowledge of team management and business processes."

Goran Mrvoš
CEO, Infosit

Try Pitch

"We started cooperation with the company 3MI Lab at the beginning of 2022 and this cooperation is still active.
3MI Lab constantly provides 5-7 software engineers and business analysts.

They have helped us expand our scrum teams working on DMS and HR-related products, and some of their engineers have become key members of our teams. Their engineers work daily in international teams and in different time zones using the scrum methodology.

I want to emphasize that 3MI Lab became our most reliable partner and we always contact them first when we needed more people."

Darko Kelišš
Regional Director of Operations, NEOGOV

Location: Zagreb, Croatia
Industry: FinTech, Crypto (Startup)

Challenge

Develop and manage a complex and dynamic subscription platform with integrated cryptocurrency wallets (custodial and non-custodial), debit card functionality, and a secure, scalable system capable of handling high transaction volumes in a rapidly evolving market.

Services provided

Our team brought expertise to the project, providing leadership in project management and product ownership and technical proficiency in mobile development, blockchain, and full-stack development. We manage the entire product lifecycle, including the subscription module and wallet integration, ensuring robust and secure solutions. Through an iterative process, we delivered continuous releases, adapting to dynamic deadlines and evolving requirements.

Results

Successful project leadership and development of all system components, with an iterative release process that allowed for constant improvements and timely feature rollouts, ensuring the platform could scale rapidly while maintaining stability and security.

Goals:

Maintain a continuous development and improvement cycle to adapt to market changes, while ensuring the scalability and security of the platform as it grows.

The roles we filled:

1 Product owner / PM
1 Solution architect
2 Mobile developers
2 Integration experts
2 Full stack developers

Try Pitch

Location: Zagreb, Croatia
Industry: Multinational oil & gas company
Number of employees: 10 000

Challenge

Ensure a complex enterprise integration environment with intricate web and service layers aimed at facilitating data exchange and monitoring between SAP, retail, and gas stations across multiple countries, and several dozen external systems.

Services provided

Multi-year development and maintenance of a complex BizTalk platform with additional layers of enterprise web applications and service solutions, which interconnect retail/gas stations across different countries, as well as over 30 other internal and external systems, including B2B with vendors and POS integration with e-goods service providers.

Results

A stable enterprise environment that operates 24/7 under enormous loads has also been the main backbone for the complete daily data exchange between the company's critical systems for many years.

Goals:

Continued stable development and maintenance of the complex platform according to predefined project activities and tasks.

The roles we filled:

1 Project manager
1 Solution architect
2 Integration experts
2 Full stack developers

Project: Development of ERP system for budgeting government accounting

Challenge

The project entailed the development of an ERP system for budgeting in government accounting. The challenge was to deliver a comprehensive, efficient solution that could streamline complex budgeting processes and enhance financial management within a government setting.

Services provided

We delivered comprehensive services, including ERP and custom app development, business analysis, and project management, integrating DevOps CI/CD for efficient software delivery, and utilizing advanced technologies (C#, .NET Core, Azure, Angular, SQL Server) under SCRUM/Kanban frameworks.

Results

The result was a stable ERP system that enhanced government budgeting and accounting, leading to improved processes, better financial management, and greater operational efficiency. It has been proven stable in production environments across numerous mid and large companies.

Try Pitch

Goals:

Develop a stable, modular, and easily extendable ERP system for future upgrades.

The roles we filled:

1 Project manager
1 Product owner
1 Solution architect
1 Integration experts
2 Testers
6 Full stack developers

Our team members have delivered successful projects for clients of various sizes and industries, using diverse technologies, methodologies, and project management approaches.
